Software Engineer

SUMMARY I am a software engineer with experience building responsive, user-focused web applications and web designs. Strong background in UI/UX implementation with solid experience in backend development, including database management and API integration. Passionate about clean, maintainable code and creating seamless user experiences. Recently took a short career break to reset and refocus, now fully re-energized and ready to contribute to impactful projects.

- WORK EXPERIENCE**
- Software Engineer, Pulsiv8 Inc.** **June 2024 - July 2025**

 - Integrated front-end components with LLM-backed APIs using client-side and server-side data fetching patterns supported by Next.js.
 - Implemented responsive, user-friendly interfaces for AI-driven workflows
 - Collaborated closely with backend and AI engineers to align UI behavior with API responses and AI-generated data
- Web Developer, Grow Forward JP, Inc.** **April 2023 - May 2024**

 - Developed and maintained responsive websites for local businesses using WordPress, focusing on custom theme development and Astra-based implementations.
 - Collaborated with clients to translate business needs into functional, user-friendly website solutions.
 - Provided technical support for clients, including troubleshooting hosting-related issues, DNS configurations, and assisting with domain and SSL certificate management.
- Senior Assistant Research and Development Engineer, Advanced World Solutions, Inc.** **Jul 2019- Mar 2022**

 - Collaborated with a team of senior developers to develop a health monitoring web application following an agile methodology.
 - Contributed to the UI/UX development and maintainance of in-house web projects with React.
 - Translated complex backend data into user-friendly dashboards and interfaces, enabling non-technical stakeholders to access insights with ease.

EDUCATION **Bachelor of Science in Computer Science** **Aug 2015- Jul 2019**
University of the Philippines Visayas

- KEY SKILLS**
